

Chautauqua Lake Visiting Scholars Program

The Chautauqua Lake Secondary School Program is a uniquely established academic program committed to the empowerment and achievement of students in the classroom and beyond. Opportunity, student voice, innovation, and leadership are common threads that connect across our academic programs. We believe that these common threads will be the keys to your success as you chart your own course on an advanced pathway. Ultimately, our goal is to provide all students with an opportunity to thrive in a safe, caring environment that prepares students to live, adjust and enjoy life in a changing world.

Project Lead the Way (Rochester Institute of Technology), Jamestown Community College and SUNY Fredonia dual enrollment, Advanced Placement, and area cultural organizations such as the Chautauqua Institution provide enrichment opportunities through our honors program. Students participating in their selected pathway can earn more than 40 college credit hours as they pursue these opportunities. We combine a traditional high school program with college credits and project based learning and experiences to help each visiting scholar achieve their fullest potential.

A Celebration of Partnership

"So worth it; what you receive from the program is well worth it. It is so good to get out of your comfort zone. Students are going to have amazing teachers and tons of support. Everyone is really inviting, teachers and students both. It is very easy to make friends. Principles of Engineering with Mr. Reyda is my favorite-we get to do a lot of hands-on work and apply the concepts. Coming to Chautauqua Lake gave me a good chance to adapt to new surroundings and learn new things."

PLTW is something colleges value highly; they want to see it on your resume. RIT asked on the application if I had PLTW classes, plus it helped with scholarships too. This is a really good opportunity to tell if you want to do this in college before you commit thousands of dollars. I am really confident in my choice now. This was an excellent opportunity to explore a solid engineering introduction, real engineering that I can use in my everyday life. Even if you didn't choose Engineering, you would still be earning college credit and the colleges see you are challenging yourself. I can't stop saying good things about it, I love my time here. I have no regrets whatsoever, it has already paid off!"

"The school offers so many electives and such a variety of classes that it makes it easy for students to personalize their own learning programs. Getting to come to school here has turned out really well for me! It has been a great opportunity and I feel it would be good for any and all students! The school offers so much!"
